NEW Invivo2 Hypoxia Workstation from Baker Ruskinn

THE FUTURE

Since 1998 Baker Ruskinn have been working with pioneering scientists around the world to make breakthroughs in cell research.

AT YOUR FINGERTIPS

Over those years researchers have devoted their lives to advancing knowledge and understanding of the way cells behave. And that means from day one you have to be confident that your results can be trusted. If it's got to be right, then it's got to be Baker Ruskinn.

MIMICKING PHYSIOLOGY

The Invivo₂ hypoxia workstation was designed and built to give you the reassurance of reliable, physiologically-relevant results under controlled conditions. It allows you to study the most complex of cell interactions under perfect hypoxic conditions, regulating and maintaining oxygen, carbon dioxide, temperature and humidity.

Whether you're hoping to replicate the environment of blood vessels or lung tissue, the Invivo₂ is the best tool for the job.

Intuitive user controls and clean display

HEALFORCE 151L CO2 and Tri-gas Incubators

Precise Temperature, CO2, O2 Control and High Humidity

- Direct heat design ensures quick heating and rapid temperature recovery.
- IR or TC CO2 sensor
- Integrated water level sensor and Innovative design of water for rapid humidification.
- Heated outer door minimizes condensation.
- NEW Tri-Gas Models allow for control of CO2, O2 and N2!

Contamination Control System

- 90°C moist heat disinfection cycle
- CO2 HEPA filter inlet
- Single sheet stainless steel interior reducing potential contamination
- Easily removable, replaceable shelves make cleaning chambers a breeze.

BMG Labtech SPECTROstar Nano

Ultra-fast, full UV/Vis spectrum absorbance microplate reader with cuvette port

Key Features

- Full-spectrum UV/Vis absorbance measurements in less than 1 second
- Measurement from 96-well to 1536-well microplate format
- Integrated cuvette port for individual samples
- Linear, orbital and double-orbital shaking as well as uniform incubation up to 45 °

BMG Labtech OMEGA Plate readers

The Omega Series of microplate readers offer true flexibility to provide you with the perfect reader to fulfil your requirements: from an absorbance-only SPECTROstar or luminescence-only LUMIstar to a fully-equipped POLARstar Omega with up to six detection modes. Your chosen instrument can also be upgraded at any time if you need more features or additional detection modes.

Key Features

- Measurement in up to 384-well microplate format (1536-well on Spectrostar)
- Top and bottom reading
- Plate shaking and uniform incubation up to 45 °C or 65 °C
- Well-scanning and real-time kinetic monitoring
- High-precision injectors with simultaneous reagent injection and detection
- Includes multi-user control and MARS data analysis software
- ACU compatible for O2 and CO2 control
- Compatible with LVIS Plate and Stacker

PCRmax Alpha PCR Thermal Cyclers

PCRmax - A Bibby Scientific Company

Key Features

- Scalable - Choose from any combination of 96 or 384 well blocks
- Compact - Save precious lab space by condensing four truly independent blocks into one chassis with no networking issues or connectivity concerns (PCRMax 4 only)
- Active Sample cooling - For sharper amplification and minimal non-specific amplification
- Programme Wizard - Generate a protocol specific to your sequence, template source and amplicon length in seconds
- Gradient - Allowing for simplified temperature optimisation, no matter the block chosen
- Android driven 7" tablet interface - Quad core speed and excellent connectivity and feel

Perfect for DNA, RNA and Protein electrophoresis

NEW Microtek Gel Imager and documentation system

Key Features

- Gel Imager for EtBr - alternative stain with High Sensitivity
- Fluorescence sensitivity up to 0.04 ng per band
- Performs 10 times better sensitivity than camera solutions (in traditional imaging)
- Patented Design with Advanced Image-Capture Skills
- Exclusive EtBr-alternative stains for safety, ecology and environment
- Meets demands for trans-illuminating, imaging and extraction
- Simple Software Brings Effective Results

ThawSTAR™ automated sample thawing system addresses the last gap in the cryopreservation workflow, replacing insufficient methods of thawing such as swirling samples in communal water baths and warming samples between hands - methods that are not standardized and potentially jeopardize the integrity and safety of the sample.

ThawSTAR™ automated sample thawing system

Key Features

- Utilizing patent-pending STAR™ sensing technology for standardized thawing and recovery.
- Hands-free operation eliminates the guess work and subjectivity of determining the thawing end point.
- Highly reproducible thermal profiles mirror those obtained from a water bath without the variability and risk of contamination.
- Accepts vials from LN2 storage or -80°C freezers.

BioT™ ULT Transporter

BioT™ ULT Transporter is a breakthrough portable solution for handling and transporting valuable temperature-sensitive biomaterials. It may also be used for freezing samples at a collection site.

Key Features

- Stays between < -70°C and -50°C for over 24 hours
- Keeps up to 8 standard 2-inch cryostorage boxes below -50°C
- Lightweight, built-in finger grips for easy carrying
- Intuitive assembly, highly durable materials

BioT™ Carrier is a portable 2-8°C cooling solution for transporting small batches of temperature-sensitive laboratory research samples.

BioT™ Carrier

Key Features

- Maintain and transport cold samples with confidence.
- Easily adjust the cooling temperature set point to raise or lower the chamber temperature to best suit your application.
- Carry cold samples between facilities, from clinic to lab, or over longer distances utilizing the car power adaptor.

Technology

The Eurosteam LAB.STM line is a series of new generation steam sterilisers, result of the most advanced design by Schlumbohm & Angelantoni Life Science, Leader in the design and manufacture of advanced research labs to the highest class BSL4.

German technology combined with Italian creativity and design based on the Corporate Know-how achieved in decades of activity in the sector, has produced equipment focused on the "total quality", concept.

This philosophy enables to meet the needs of an Elite market requiring total safety assurance, absolute reliability and repeatable sterilisation processes avoiding assessment risks to the operators.

Total quality to produce medical devices with high construction standards, advanced techniques and innovative solutions.

Total quality for an environmentally-friendly project with water consumption, extremely low electricity and heat dissipation at almost zero impact on the environment.

Savings

The constant research of high productivity and efficiency leads us to a design commitment aimed to "Safety", "Total quality" and "Saving".

"Saving" is one of the intents that we focus in the design phase: operating and maintenance saving adopting high quality, reliable and long life devices, solutions and components.

REDUCE YOUR WASTE COSTS WITH TESALYS AUTOCLAVE/SHREDDER

STERIPLUS™

by **Tesalys**
Making biomedical waste safe

The Safest **Shredding & Autoclaving** System for Biomedical Waste

YOUR INFECTIOUS WASTE DECONTAMINATED AND SHREDDED IN 30 MIN

AS SIMPLE AS 1, 2, 3...

Safe loading of waste

- Step 1** Shredding (8-10 mm).
- Step 2** Decontamination process at 135°C for 10 min. (steam sterilization)
- Step 3** Evacuation of biodecontaminated effluents to sewer.

Unloading of biodecontaminated solid waste for disposal via household waste circuit*
